Hey Nic,

I know things are really ramping up and crazy. Here at the HQ EOC we are getting request from Ryan Jackson, and other EPA Senior Leaders for DW and WW system

information. The Water Program is preparing to send any folks who haven't already deployed out the door. They asked if we could help them out by accessing RM and exporting the data so we can filter it for whatever the request of the day is from the Senior Officials.

I am the best person to do this since I have RM experience but my RM password has expired. I would like to try to get the exports from the Website since I got a new computer and no longer have the RM software on my desktop. If I can export from the website, then I literally only need to get my password reset. Use WaterRocks1 as my new password please!

Thanks, and good luck! Thinking about you guys!

Subject: Re: M6H1 – Harvey Response: PWS Operational Status Codes and Eval Forms

The DW and WW data will be in the RM with the information fields needed. REOC will continue to send the daily sitreps, but they will likely just include summary information on DW and WW status. Your team could help out by exporting the more detailed data from RM into Excel or whatever format is preferred for HQ updates if that's possible.

Thanks,
Jim

Jim, thanks for the update. Just to confirm, will your team or the REOC send daily to the Water Desk in the HQ EOC an Excel export from Response Manager for all assessed systems (which would include county/location, pop served, status code, etc for each system)? I think this approach makes the most sense, rather than have you all develop data tables for every separate inquiry from the AO's office. D
